在项目中监控代码运行的状况,可以采用点评的Cat项目来监控整个项目,但是按照官 方的文档来部署cat,总会遇到各种问题,讲解的也不够简明清楚,现在用一个单机来 部署运行cat监控项目。

首先,到项目的Git网页下载整个项目:

https://github.com/dianping/cat

接着就是进入这个项目的目录,运行打包安装命令:

mvn clean install -DskipTests (需要maven)

[INFO] Scanning for projects...

[WARNING]

[WARNING] Some problems were encountered while building the effective model for com.dianping.cat:cat-home:war:1.3.6-SNAPSHOT

[WARNING] The expression \${version} is deprecated. Please use \${project.version}

instead.

[WARNING]

[WARNING] Some problems were encountered while building the effective model for com.dianping.cat:cat-agent:war:1.3.6-SNAPSHOT

[WARNING] 'build.plugins.plugin.version' for org.apache.maven.plugins:maven-warplugin is missing. @ com.dianping.cat:cat-agent:[unknown-version], C:Wsers\Life

ix\Documents\cat\cat-agent\pom.xml, line 80, column 11 [WARNING]

[WARNING] It is highly recommended to fix these problems because they threaten t he stability of your build.

[WARNING]

[WARNING] For this reason, future Maven versions might no longer support buildin g such malformed projects.

[WARNING]

[INFO] -[INFO] Reactor Build Order:

http://blog.csdn.net/

执行完成后,运行 CAT 安装插件命令:

mvn cat:install

会提示输入MySQL数据库的连接信息,账户和密码。可能会提示缺少 \data\appdatas\cat 目录,手动添加就可以了。

Please input username:root
                                                         http://blog.csdn.net
Please input password:[]
```

最后进入cat-home目录: cd cat-home, 运行mvn jetty:run

没有任何错误的提示就可以启动了。在浏览器输入地址:

localhost:2281会进入界面,这个界面有说明文档还要演示效果等,没什么用,关掉。

进入项目,拷贝/cat-home/target/cat-alpha-1.3.6-SNAPSHOT.war这个文件到tomcat的webapps里面,修改名字成:cat.war。在tomcat所在的盘根目录需要有data文件夹,里面有:

\data\appdatas\cat和\data\applogs\cat 文件夹,没有的话就手动创建。

地磁盘 (C:) ▶ data ▶ appdatas ▶ cat

• • • • • • • • • • • • • • • • • • • •				
□ 名称	•	修改日期	类型	大小
ll bucket		2015/7/20 20:15	文件夹	
at-cat.mark		2015/7/17 11:38	MARK 文件	1 KB
cat-cat-agent.mark		2015/7/20 17:10	MARK 文件	1 KB
at-UNKNOWN.mark		2015/7/20 21:30	MARK 文件	1 KB
client.xml		2015/7/20 20:28	XML 文件	1 KB
datasources.xml		2015/7/17 11:37	XML 文件	2 KB
server.xml		2015/7/20 20:28	XML文件 http://bl	og. csdn. net/

\data\appdatas\cat文件夹里面的内容在mvn cat:install这个步骤会自动创建出来 client.xml、datasources.xml和server.xml三个文件,datasources.xml是数据库连接 信息,不用改变的话就无需修改,client.xml和server.xml两个文件里,有多少台服务器,就要写多少台服务器的地址上去。由于我是在本机上做实验,所以就只有一台机器的地址。

client.xml文件只需改红色框内的内容就可以了:

server.xml文件改红色框的内容,有多台机器,就像红框下面注释的那样改就可以了。

lava. lang. RuntimeException: Error occured during handling outbound action (router)
```

在浏览器里面输入http://localhost:8080/cat/r,可以看到CAT下面部署后的界面。左上角的"实时"功能才是我们最需要的!

点击后发现都是demo的实例,可以查看相应的代码来学习怎么使用。

在项目的home模块里面的test部分,有个com. dianping. cat. demo. TestStorageMessage 类,里

面的代码在我们的界面都可以找到对应的效果。

如sendSQLMsg这个方法,在界面的"Event"监控功能中,会发现监控的名字和方法。

```
[java]
      private void sendSQLMsg(String name, String domain, String method, String serverIp) throws Into
01.
              Transaction t = Cat.newTransaction("SQL", "sql.method");
02.
03.
04.
               Cat.logEvent("SQL.Method", method);
               Cat.logEvent("SQL.Database", String.format(JDBC_CONNECTION, serverIp, name));
05.
06.
              MessageTree tree = Cat.getManager().getThreadLocalMessageTree();
07.
08.
09.
               ((DefaultMessageTree) tree).setDomain(domain);
10.
              Thread.sleep(500 + new Random().nextInt(1000));
               int nextInt = new Random().nextInt(3);
11.
12.
               if (nextInt % 2 == 0) {
13.
                   t.setStatus(Transaction.SUCCESS);
14.
15.
               } else {
16.
                   t.setStatus(String.valueOf(nextInt));
17.
18.
19.
              t.complete();
20.
```

```
[java] 📄
01.
      private void sendSQLMsg(String name, String domain, String method, String serverIp) throws Into
               Transaction t = Cat.newTransaction("SQL", "sql.method");
02.
03.
               Cat.logEvent("SQL.Method", method);
04.
               Cat.logEvent("SQL.Database", String.format(JDBC_CONNECTION, serverIp, name));
05.
06.
07.
               MessageTree tree = Cat.getManager().getThreadLocalMessageTree();
08.
               ((DefaultMessageTree) tree).setDomain(domain);
09.
              Thread.sleep(500 + new Random().nextInt(1000));
10.
               int nextInt = new Random().nextInt(3);
11.
12.
               if (nextInt % 2 == 0) {
13.
14.
                   t.setStatus(Transaction.SUCCESS);
               } else {
15.
                   t.setStatus(String.valueOf(nextInt));
16.
17.
               }
18.
19.
              t.complete();
```

http://blog.csdn.net/

对应代码里面的这两行名称:

20.

```
[java] 📄
      Cat.logEvent("SQL.Method", method);
01.
      Cat.logEvent("SQL.Database", String.format(JDBC_CONNECTION, serverIp, name));
02.
      [java] 📄
               Cat.logEvent("SQL.Method", method);
01.
      Cat.logEvent("SQL.Database", String.format(JDBC_CONNECTION, serverIp, name));
02.
```

因此,我们可根据这个很容易地学习怎么使用。因为Cat项目已经启动了,整个机器都 在监控的范围内,编写的项目有指定受cat项目监控便可实现实时监控,分析我们代码 的执行效果了。

新建一个工程,在工程里面加入cat-home\target\cat-home-1.3.6-SNAPSHOT\WEB-INF\1ib里面的所有jar包,暂时不知道哪些有用,哪些没用,所以全部加入工程中是没 错的了。

在工程里面编写一个类,内容如下:

```
[java]
      public class MyTest {
         public static void main(String[] args) {
02.
03.
              Transaction t = Cat.newTransaction("TEST", "test.method");
04.
               Cat.logEvent("Method_test", "good");
05.
               Cat.logEvent("Method_event", "bad");
06.
07.
08.
               int nextInt = new Random().nextInt(3);
09.
               if (nextInt % 2 == 0) {
10.
11.
                   t.setStatus(Transaction.SUCCESS);
               } else {
12.
13.
                   t.setStatus(String.valueOf(nextInt));
14.
15.
              t.complete();
16.
17.
          }
18.
```

```
[java] 📄
                 01.
      public class MyTest {
02.
          public static void main(String[] args) {
               Transaction t = Cat.newTransaction("TEST", "test.method");
03.
04.
               Cat.logEvent("Method_test", "good");
05.
               Cat.logEvent("Method_event", "bad");
06.
```

```
07.
08.
               int nextInt = new Random().nextInt(3);
09.
               if (nextInt % 2 == 0) {
10.
                   t.setStatus(Transaction.SUCCESS);
11.
12.
13.
                   t.setStatus(String.valueOf(nextInt));
14.
15.
               t.complete();
16.
17.
      }
18.
```

运行,发现很快就结束了!输入提示看日志。

打开日志,发现有如下提示:

[plain]

```
[07-20 22:05:34.780] [INFO] [DefaultModuleContext] Starting thread(Cat-ModelService-0) ...

```

提示很明白,就是没有app. properties这个文件,在项目的说明文档里面也有说到,这个文档主要是指定监控的Cat项目的。因为我们的监控项目改为了cat. war来启动了,所以就在源代码的目录下添加META-INF文件夹,里面添加app. properties这个文件,内容就是很简单的:

app. name=cat

这个名称和浏览器里面的domain对应,如果要改成其他名称,那么这个domain的值也要改成对应的名称。

🖺 localhost:8080/cat/r/t domain=cat kdate=2015072117&ip=All&type=System

注意: META-INF文件夹必须改为源文件的指定格式的。

再次运行代码,有如下效果,程序不会自动关闭了,说明在监控中……

查看日志,一切正常:

task) ...

StatusUpdateTask) ...

07.

和两个event事件了!

面,数据又回来了!

到此,应用cat实时监控系统部署成功,剩下的事情就是慢慢研究代码怎么更好地使用Cat了!

有时会发现实时监控页面什么数据都没有显示了,查看日志记录,会发现一大堆找不到10.0.0.1:2280的错误:

```

[07-21 13:39:21.536] [INFO] [Channel Manager] close channel null 这需要我们点击右上角的登陆,用账号和密码都是catadmin来登陆,在"配置"的最后
一项"全局告警配置"的"客户端路由"里面改为127.0.0.1:2280后,提交刷新实时页
```

用intellij开发scala

Mysql设置自增长主键的初始值

楼主好:为什么我运行之后,还是自动关闭,如下显示

Logger file D:\data\applogs\cat\cat_20160415.log

log4j:WARN No appenders could be found for logger (io.netty.util.internal.logging.InternalLoggerFactory).

log4j:WARN Please initialize the log4j system properly.

[04-15 11:32:48.048] [WARN] [cat] Cat is lazy initialized!

shutdown task TcpSocketSender

shutdown task TcpSocketSender-ChannelManager

shutdown task merge-atomic-task

shutdown task StatusUpdateTask

Re: 小新8 2016-04-26 11:49发表 🧪

回复zhangmengy:有这回事?具体是什么问题?
